

SUFYAN KHALID

Software Engineer | AI & Automation Developer | Full Stack Developer

Faisalabad, Pakistan | +92 323 1936762 | sufyankhalid680@gmail.com

Portfolio: sufyankhalidportfolio.netlify.app | GitHub: github.com/Miansufyan6

LinkedIn: linkedin.com/in/muhammad-sufyan-khalid-pervaiz-1b2159418

PROFESSIONAL SUMMARY

Software Engineering graduate specialising in Artificial Intelligence, AI agents, and workflow automation, with hands-on project experience in full stack and front-end web development. Skilled in JavaScript, Python, React.js, and SQL, with practical exposure to Generative AI, LLM concepts, prompt engineering, AI API integration, and n8n automation. Has independently designed and built multi-step AI automation workflows and AI-powered application concepts, alongside academic software engineering projects covering system design, implementation, testing, and documentation. Seeking an entry-level or internship position with an international technology team to contribute to real-world AI and software products.

KEY COMPETENCIES

AI & Automation: Artificial Intelligence, Generative AI, AI Agents, Agentic Workflows, AI Automation, Prompt Engineering, LLM Concepts, AI API Integration, AI Workflow Design

Software & Web: Full Stack Web Development, Front-End Development, Responsive Web Design, JavaScript Development, Software & System Design, Web Applications

Engineering Practice: Software Development Lifecycle, Requirements Analysis, Testing & Evaluation, Technical Documentation, Version Control, Business Process Automation

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, Java, C++, SQL

Web Development: HTML5, CSS3, React.js, Bootstrap, Responsive Web Design, Node.js, npm

AI & Automation: Generative AI, AI Agents, LLM Concepts, Prompt Engineering, AI APIs, n8n, AI Workflow Design, Artificial Neural Networks (ANN)

Databases: MySQL, SQL

Tools & Platforms: Git, GitHub, Visual Studio Code, Docker, Netlify, Linux

Additional: Search Engine Optimisation (SEO), AI-assisted Content Creation, Graphic Design

PROFESSIONAL EXPERIENCE

Independent Software & AI Developer | Self-Directed Projects | 2025 – Present

Independent, project-based development (non-employment)

- Design and build AI-powered application concepts, web applications, and multi-step automation workflows.
- Develop AI agent workflows covering research, topic evaluation, script generation, captions, and automated content pipelines.
- Integrate AI APIs and large language models into automation flows built with n8n in self-hosted environments.
- Apply prompt engineering and Generative AI techniques to improve output quality and workflow reliability.

Founder Vision — TechCraft Solutions | Independent Technology Initiative | January 2026 – Present

Early-stage concept; not yet an operating company

- Developing the technical foundation and service roadmap for a planned technology venture focused on AI solutions, automation, software engineering, and web development.
- Researching applications of AI agents and business process automation to real-world operational problems.

Software Engineering Project Developer | Academic & Personal Projects | 2022 – 2026

- Built software and responsive web applications using modern programming and web technologies.
- Applied software engineering principles including requirements analysis, system design, implementation, testing, and documentation.
- Managed source code and project versioning using Git and GitHub.

AI & AUTOMATION PROJECTS

AI-Powered Content Automation Agent | Independent Project | 2026

- Designed an end-to-end AI automation workflow for automated digital content creation.
- Implemented automated research, AI topic selection and scoring, script generation, caption and hashtag generation, and image-prompt generation.
- Architected the workflow using n8n, AI APIs, scheduled execution, and duplicate-topic checking for structured, repeatable output.

- Coordinated multiple AI-driven tasks within a single agentic pipeline spanning research, analysis, generation, and media processing.

AI Social Media Automation System | Independent Project | 2026

- Designed an automated content pipeline: research, AI analysis, topic selection, script generation, caption and metadata creation, image generation, short-form video assembly, media processing, and publishing.
- Defined the system architecture and API-based integration points between each automated stage.

KEY SOFTWARE PROJECTS

CodeBot — AI-Powered Creativity and Productivity Platform | Final Year Project | 2025 – 2026

- Developed an AI-powered software solution designed to support creativity and productivity through intelligent assistance.
- Defined system requirements and software architecture, and designed application workflows and user interactions.
- Implemented core functionality, carried out system integration, and performed testing and evaluation.
- Produced full software engineering documentation following software development lifecycle principles.

Technologies: Artificial Intelligence, Web Technologies, Database, System Design, Testing & Evaluation

Responsive Portfolio Website | Personal Project

- Designed and developed a responsive personal portfolio with About, Skills, Education, Certificates, Projects, and Contact sections.
- Implemented adaptive layouts for desktop, tablet, and mobile using modern UI design principles.
- Version-controlled the codebase with Git and GitHub and deployed the site on Netlify.

Technologies: HTML5, CSS3, JavaScript, Git, GitHub, Netlify

Scientific Calculator Web Application | Personal Project

- Built a responsive scientific calculator implementing mathematical operations in JavaScript.
- Added interactive calculation functionality with calculation history and a modern responsive interface optimised for mobile and desktop.

Technologies: HTML5, CSS3, JavaScript

EDUCATION

Bachelor of Science in Software Engineering | Riphah International University | 2022 – 2026

CGPA: 3.1 / 4.0

FSc Pre-Engineering | Qayadat College Thingi | 2019 – 2021

Marks: 961 / 1100

CERTIFICATIONS & TRAINING

Cisco Networking Academy

- CPA — C++ Programming Fundamentals · NDG Linux · IT Essentials · Networking Essentials
- CCNA Training (course completed, not certified): networking fundamentals, IP addressing, routing, switching, and protocols.

COMPUTER & ADMINISTRATIVE SKILLS

Data Entry & Record Management: Accurate data entry and validation, database record creation and querying with MySQL/SQL, spreadsheet preparation, structured record keeping, technical and project documentation

Computer Operations & IT Support: Windows and Linux fundamentals, computer hardware and software troubleshooting, networking fundamentals (Cisco IT Essentials, Networking Essentials, NDG Linux, CCNA Training)

Office & Digital Productivity: Word processing, spreadsheets, email and online collaboration tools, internet research, AI-assisted productivity tools

PROFESSIONAL SKILLS

Problem Solving — Excellent · Communication — Strong · Teamwork — Strong · Adaptability — Strong

Analytical & Logical Thinking · Research · Quick Learning · Technical Documentation · Project Planning · Creative Thinking

LANGUAGES

English — Professional Working Proficiency · Urdu — Native · Punjabi — Fluent
